TREE SPECIES (SCIENTIFIC NAME)

Pinus merkusii

ENGLISH COMMON NAME

Merkus Pine

INDONESIAN COMMON NAME

Pinus

TREE FAMILY	AVERAGE LEAF SIZE (CM)
PINACEAE	15-25cm × 0.25cm Length Width
ELEVATIONAL RANGE (M)	TREE HEIGHT
0-2000м	LARGE (> 35M)

COFFEE AGROFORESTRY INFORMATION

COFFEE SYSTEM	COFFEE IMPACT
🌗 ROBUSTA 🌖 ARABICA	Unknown
REGENERATION	CULTIVATION
Unknown	🖡 PLANTED

DISTRIBUTION

NATIVE TO

Region: Asia Myanmar, Philippines, Thailand **Indonesia:** Java, Sulawesi, Sumatra

TREE MANAGEMENT

Mycorrhizae are required for successful growth and allow seedlings to survive in more adverse sites. First thinning is usually carried out in year 9 or 10 then about every 5 years. Rotation cycle of 30 years is needed for optimal timber production and a cutting cycle of 15 years is usually practiced for pulpwood production

PREVALENCE

Unknown

TREE BENEFITS AND USES

FARMER USES

Lumber, Medicinal, Product

Used as a general-purpose timber and can also be used for construction work, flooring, and boat building as it is fairly durable and heavy. Ethyl alcohol extracts of P. merkusii showed anti-cancer activity. In Indonesia, it has been successfully intercropped with Irish potatoes.
